Volunteer with CBF!

Monocacy River Watershed

Riparian Restoration in Keymar, MD

Saturday, October 6, 2018
9:00AM – 1:00PM

Come help CBF plant over 1,200 trees and shrubs on a farm along a tributary to Little Pipe Creek in the Monocacy River Watershed on the border of Carroll and Frederick Counties. The landowner is in the process of fencing cattle out of the stream and planting approximately 10 acres of riparian forest buffer to improve water quality and wildlife habitat while also reducing downstream flooding. The farm has long term plans of converting existing corn and soybean fields into permanent pastures for rotational grazing. The first phase of this project will be planting approximately 6 acres of new riparian forest buffer. *This project is part of CBF's partnership with WGL Energy and Sterling Planet to sequester carbon through restoring forested stream buffers. Project Partners include the U.S. Fish and Wildlife Service, the Carroll County Soil Conservation District, and the Monocacy and Catoctin Watershed Alliance. Funding is provided through WGL Energy, Sterling Planet and the National Fish and Wildlife Foundation.*

Students can earn up to 6 service hours (travel time included) for volunteering. All ages welcome!
Contact David Tana at MDRestoration@cbf.org for more information.

All are welcome to join us! Please visit www.cbf.org/events/calendar to see our full calendar and to register. Thank you for helping to
